

ADE, INC.

for what's *fragile* in your world

*our family of Flex-N-Stretch™ protective packaging*

*FlexNStretch™ Suspension, Slingspring and Inclosure packs* are all designed to deliver the specific product protection that is needed without the storage, environmental, labor, ease of use or cost problems associated with traditional die-cut foam packs, molded foam packs, instant-foam packs, end-cap type suspension packs, or corrugated clamping retention packs. Whether you're shipping laptops, PDA's, picture frames, hard-cover books, monitors, disc drives, glassware, modems, or any other type of fragile product, you can count on FlexNStretch packs to deliver what you need!

*FlexNStretch™ Suspension Packs*

*FlexNStretch™ Slingspring Packs*

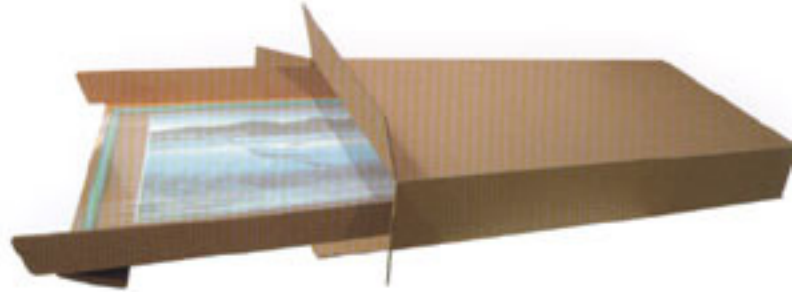

*FlexNStretch™ Inclosure Packs*

- All FlexNStretch packs deliver exceptional protection from damage due to shock and vibration encountered in normal shipping and handling.
- All FlexNStretch packs are easy to use and require no time consuming, complex set-up procedures in order to safely load and unload fragile products.
- All FlexNStretch hammocks utilize a durable, resilient elastic material which will continue to perform reliably despite repeated stretching, tears or punctures.
- FlexNStretch packs can be safely and reliably reused, reducing pack costs as well as environmental concerns.

*Discover which FlexNStretch™ pack is right for you.*

ADE or any of its authorized Distributors can help you determine whether you need a Suspension, Slingspring or Inclosure design. Regardless of which FlexNStretch design is recommended, there are Standard sizes which are available for immediate shipment. So, whatever your product's fragility is! No matter what your shipping requirements are! Independent of the number of shipments you are planning to make! Regardless of the shipping problems you've got now or had in the past!  
– There's a pack in the FlexNStretch family that has an answer for you.

All FlexNStretch packs can be folded flat when not in use, significantly reducing the warehouse space that is needed to store foam packs, bubble materials and messy loose-fills.

## Custom Packaging Requests

ADE, Inc. takes pride in its ability to design unique, custom packaging solutions that meet the specific needs of its' customers. Which is why ADE's Design Department uses a disciplined, interactive approach that includes Design Engineers, Salespeople and, most important, the Customer who is both the source and final judge of all the design efforts.

The number one, and main goal, of our Design Department is to ensure that your product ships safely, but just as crucial are the other intangibles such as:

*Accommodating different sized products in one pack • Reducing the shipping cube of the package  
Storage space requirements for when the pack is not in use • Re-usability  
Disposability • Attractiveness • Package unit cost and whatever else might be of concern.*

From the above information a Design Plan is created, reviewed and implemented. ADE has an ISTA Certified Lab and Testing Facility, thus test results from samples can be used as a reliable standard for commercial production. ADE has built its reputation on its willingness to tackle difficult packaging problems and its willingness to do so, regardless of the quantity!

For us, any packaging problem that is solved is a piece of useful and profitable knowledge.

FlexNStretch Inclosure Packs  
with the adapt-a-flaps® adjustment system means...

*One Inclosure Pack for many different product sizes.*
